DIESEL FORKLIFT

The forklift truck is equipped with Cummins B6.7 engine that meets Euro V emission standards. It is also installed with a high-efficiency large-capacity torque converter, realizing a driving speed of 25km/h, a gradeability of 30% and a traction force of 150kN.

The hydraulic system used is a dual pump converging system, which has a lifting speed of 350 mm/s and features load-sensitive, preferential steering. The hydraulic braking is light and

The wide-field gantry is designed and the cab front glass is of large arc shape to improve the front view angle.

The cab can be tilted by about 60° for easy maintenance. The wide-angle tilting hood is an open hood, ensuring fast and efficient maintenance.

The backup view can be displayed in real time.

Large-area glass is set at the rear of the cab, making the field of view wider.
